

REPLACEMENT - PAGE 9, 1st PARAGRAPH

Fig. 15 shows a modified configuration having also only one aspirator motor 3. The control in regard to from which receiving chamber 1, 2 air is being removed, is realized in the embodiment according to Fig. 15 [[12]] by a linkage with two switching levers 35, 36 [[46]] that pivot a switching flap 37 so that the vacuum side of the aspiration motor 3 is connected alternatingly to the receiving chambers 1, 2. The main valves are formed by the switching flap 37.
